

# ICCCAD Youth Fellowship Alumni Report 2024

## Personal Information

1. **Name:** Farhana Yasmin Ayesha
2. **Fellowship Batch ( Year)** 2024
3. **Contact Information:**
  - **Phone Number:** 01969255689
  - **Email ID:** farhanayas2001@gmail.com
  - **Current Location ( Upaz ila and district)** South Mollapara, Shipyard, Khulna
4. **Current Occupation/ Role** Student

## Fellowship Experience

1. **Briefly describe the most valuable lessons or skills you learned during the fellowship.**  
(Paragraph maximum 150 words)

Every lesson on the fellowship journey was important and very instructive. I have learnt many new things in this fellowship. Learned more about loss and damage, locally led adaptation (LLA), and more on climate justice. Learned new details about loss and damage. Each topic is explained in detail in this fellowship journey. Through which a clear understanding of all matters has been achieved. The concept of loss and damage was quite unfamiliar to me. But I got to know all these things very well.

Along with these wonderful learnings, various skills are also acquired. Various skills are acquired from here, including networking skills and communication skills. The courage to work on climate justice in my own community has doubled. The ability to overcome mental barriers and work in the community is also acquired. Always have a mindset of working with climate. This fellowship journey not only inspired me to work on climate but also helped me learn new things. This fellowship was a wonderful journey from the beginning. This fellowship has multiplied the skills and interest to work on climate.

2. **Which sessions or activities during the fellowship were most impactful for you? Why?**  
(Paragraph maximum 150 Words)

Every activity of this fellowship has had a great impact. However, the field visit had a different effect on me. Going on a field visit and learning directly about the Climate Change project was a different matter. A climate-vulnerable community visit was done on a field visit, and all the things known about community-based climate adaptation and mitigation technology were great. Also, one thing that had the most impact was visiting

climate-vulnerable communities and participating in focus group discussions. FGDs directly discuss the adverse effects of climate on their lives. Share their life stories. Climate-vulnerable community people also discussed what solutions they themselves are looking for in order to survive in the future. These stories of their life helped them to know and think about many new things. And a visit to the first water museum in Asia was another interesting affair. But another wonderful thing was the meeting with local youth climate activists and discussion about their initiatives during the disaster. Really inspired a lot from them. This field visit has sparked an interest in knowing many things in a new way. Discussions with the people of the community and their thoughts have had a great impact on my life.

## Implementation of Learning

1. \* \* \* **How have you applied the knowledge or skills gained from the fellowship in your personal or professional life? Examples of specific actions, or initiatives you have led or contributed to advocacy, awareness, event, workshop, project, etc.)** (Paragraph - Maximum 200 words)

I have always been interested in learning and working on climate-related issues. I am also personally vocal about climate justice. This fellowship journey has given more inspiration in all these matters. This fellowship inspired me to work in a new way. The learning and skills of this fellowship have impacted my personal and social life. I have done a variety of climate-related activities in my community. We are also trying to conduct climate-related sessions with people in climate-prone areas of our region and do small projects related to this. Tried to inform them about various climate-related issues. And inspired them to engage in various climate-related activities. I have tried to encourage them in various activities, including tree planting. I gave them various educations to prevent and work on environmental pollution. Currently, I participate in discussions, including advocacy meetings locally, to take action on various issues related to climate and give my opinion. And climate ideas are being thought of and implemented at various times. This has a positive effect. Participating in various offline and online climate-related campaigns, workshops, and events and sharing my learning and knowledge with others. Constantly working to inspire others to act on climate justice.

2. **Any notable achievements, success stories, or testimonials from the above-mentioned activity- 1 you have worked** (Paragraph - Maximum 150 words)

Conduct awareness campaigns with people in climate-vulnerable areas around our community. Conducted sessions on various topics. I worked with them to discuss general ideas on climate and implement them. And in some communities, efforts have been made to educate those who have no climate knowledge on a variety of climate-related topics. And different types of discussion have been done to ensure

justice for the climate of the people of the said community, and this trend continues and will continue. Moreover, to create awareness among the students, they are encouraged to take sessions at different times and engage in various related activities. Also, we are doing various activities related to climate with the students in the educational institutions of the remote areas.

Being able to do various climate-related activities with ordinary people in the community is another achievement and pleasure.

**3. What challenges, if any, have you faced while implementing your learning? How did you overcome them? (Paragraph- Maximum 150 words)**

I have faced various challenges at different times while sharing the learnings I have acquired in the community. Because most of the people here are uneducated and poorly educated, and they have no knowledge about climate. For this reason, they were not interested in knowing these things first. They despised and were indifferent to these activities. Also, people in remote areas were not motivated to do public climate work. Unknowingly, they were involved in various harmful activities like environmental pollution.

And at first the people of the first community were reluctant to respond to climate action. But now they are aware of these things.

**Impact of your work**

**1. Approximately how many people have directly benefited from your actions inspired by the fellowship during 2024 (e.g., awareness campaigns, capacity building, etc.)**

Event/Activities	Location (district)	Number of people reached		Total	Means of verification (Upload Social media link, video link, link of Pictures, publication link, FGD notes, attendance, any other relevant documents etc.)
		Women	Men		
Awareness Campaigns	Daulatpur Khulna	150	100	250	
Awareness Campaigns	C & B colony, Rupsha	40	20	60	
Capacity Building	South Mollapar khulna	30	20
